VILA. Two materials combined in a strong and elegant sun lounger.

PRESS RELEASE

01/2025

VILA. Minimalist and functional design

The VILA sun lounger by Ezpeleta stands out for its refined lines and is surprisingly robust and easy to use.

It is composed of a lacquered aluminum structure, a breathable and antibacterial Phitertex® fabric surface and fiberglass-reinforced polypropylene legs. The whole assembly is joined together with stainless steel screws and by means of an expander system located at the joint between the structure and the legs.

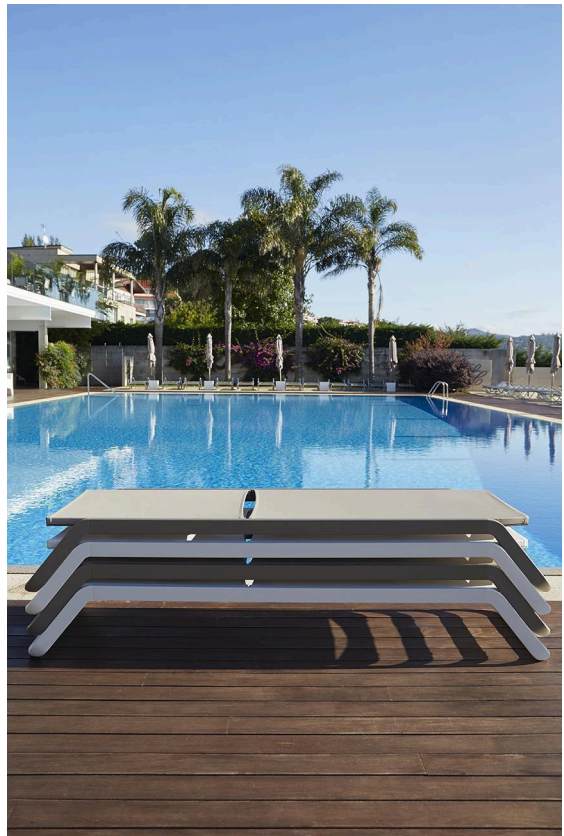

The materials have been selected for optimum FUNCTIONALITY:

- The 100% recyclable aluminum structure gives strength and lightness to the whole.
- The Phifertex fabric contributes to the comfort and ergonomics of the lounge, while resisting humidity and maintaining its tenacity over time.

- The 100% recyclable polypropylene legs with fiberglass give it greater durability (highly resistant to chemical agents such as chlorine or saltpeter) and allow it to be used on any surface, even water or sand.
- Its backrest can be folded in five positions for greater comfort.
- Its design facilitates vertical stacking and movement, thanks to the wheels hidden in its legs.
- Its flat structure means a great saving in costs, allowing it to be placed on the market at a very competitive price.
- Its composition in different parts also facilitates the replacement of parts, extending the life of the product and reducing the carbon footprint.

It is available in white, taupe and anthracite single-colour versions and in two combined versions, the one with a white structure and taupe fabric and the one with a taupe structure and olive-coloured fabric. It combines perfectly with the VILA side table, in the same colours, as well as with the rest of the Ezpeleta outdoor furniture collection.

90 years of history and sustainable innovation in outdoor furniture

With 90 years of history, Ezpeleta has established itself as a leading family company in the design and manufacture of outdoor furniture. Experts in creating functional, high quality and appealing designs, they stand out for offering resistant and sustainable products, capable of adapting to any terrace or outdoor space.

Thanks to the use of quality materials, a skilled workforce, collaboration with local suppliers and a firm commitment to sustainability, Ezpeleta continues to grow its international presence, now reaching 90 countries around the world.
